Food::hasTakeAway

```
graph LR; A[PlaceExportToJsonVisitor::visit] --> C[Food::hasTakeAway]; B[PlaceExportToJsonVisitor::visit] --> C;
```

The diagram illustrates two separate calls to the `PlaceExportToJsonVisitor::visit` method. Each call is represented by a white rectangular box with a black border. Both boxes have arrows pointing to a single gray rectangular box on the right, which represents the `Food::hasTakeAway` method. This suggests that both visits trigger the same `hasTakeAway` operation.
