

std::runtime_error

```
classDiagram
    class std_runtime_error["std::runtime_error"]
    class XmlParseError
    std_runtime_error <|-- XmlParseError
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class 'std::runtime_error', which is divided into three horizontal sections. The top section contains the text 'std::runtime_error', while the two sections below it are empty. At the bottom is a gray box representing the derived class 'XmlParseError', also divided into three horizontal sections. The top section contains the text 'XmlParseError', the middle section is empty, and the bottom section contains the text '+ XmlParseError()'. A blue arrow with an open triangular head points from the top section of the 'XmlParseError' box to the bottom section of the 'std::runtime_error' box, indicating that 'XmlParseError' inherits from 'std::runtime_error'.

XmlParseError

+ XmlParseError()
