

PlaceExportToJsonVisitor  
::visit

PlaceExportToXmlVisitor  
::visit

Monument::getConservation  
Status

```
graph LR; A[PlaceExportToJsonVisitor::visit] --> C[Monument::getConservationStatus]; B[PlaceExportToXmlVisitor::visit] --> C;
```

The diagram illustrates a Visitor design pattern. On the left, two white rectangular boxes represent visitor methods: 'PlaceExportToJsonVisitor::visit' (top) and 'PlaceExportToXmlVisitor::visit' (bottom). On the right, a gray rectangular box represents the target method: 'Monument::getConservationStatus'. Two blue arrows point from the right side of each visitor box to the left side of the target box, indicating that both visitors delegate the 'visit' operation to the 'getConservationStatus' method of the 'Monument' class.
