

PlaceExportToJsonVisitor
::visit

PlaceExportToXmlVisitor
::visit

PanoramicPoint::getAltitude

```
graph LR; A[PlaceExportToJsonVisitor::visit] --> C[PanoramicPoint::getAltitude]; B[PlaceExportToXmlVisitor::visit] --> C;
```

The diagram illustrates a common code pattern where two different visitor methods, `PlaceExportToJsonVisitor::visit` and `PlaceExportToXmlVisitor::visit`, both call the same method, `PanoramicPoint::getAltitude`. The visitor methods are shown in white boxes on the left, and the target method is shown in a gray box on the right. Blue arrows indicate the direction of the calls from the visitors to the target.
