

PlaceExportToJsonVisitor
::visit

PlaceExportToXmlVisitor
::visit

Mall::getShopCount

```
graph LR; A[PlaceExportToJsonVisitor::visit] --> C[Mall::getShopCount]; B[PlaceExportToXmlVisitor::visit] --> C;
```

The diagram illustrates a dispatch mechanism where two different visitor methods, `PlaceExportToJsonVisitor::visit` and `PlaceExportToXmlVisitor::visit`, are mapped to a single target method, `Mall::getShopCount`. The target method is highlighted in a gray box, while the visitor methods are in white boxes. Blue arrows indicate the mapping from each visitor's `visit` method to the `getShopCount` method.
