

PlaceExportToJsonVisitor
::visit

PlaceExportToXmlVisitor
::visit

Mall::getShopCount

```
graph LR; A[PlaceExportToJsonVisitor::visit] --> C[Mall::getShopCount]; B[PlaceExportToXmlVisitor::visit] --> C;
```

The diagram illustrates a visitor pattern where two different visitor objects, `PlaceExportToJsonVisitor` and `PlaceExportToXmlVisitor`, both implement the `visit` method. These methods are shown pointing via blue arrows to a common target method, `Mall::getShopCount`, which is highlighted in a gray box. This represents how different visitors can interact with the same element in a system.
